### DETAILED ACTION

Claims 1-7 are pending as originally filed.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by JP-2002-018248.

JP teaches a spiral wound membrane element in which the permeate side passage material has warps in parallel to the direction of flow, having width W1 200-1000 microns (paragraph 56), warp diameter h is 100-500 microns (paragraph 53), weft diameter is 50-250 microns (paragraph 54; weft can be less than 50 microns, but undesirable according to paragraph 54), which meet all the criteria claimed.

2. Claims 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Janneck (US 4,022,692).

Janneck teaches a spiral wound element for dialysis in which the one of the two sides of the membrane has a spacer material with warp diameter 0.37 – 0.67 times the weft diameter (column 3 lines 40-50), specific example with warp diameter 0.85 mm, weft 0.4 mm, pitch 9 filaments/inch (column 4 lines 1-35, table), which meets the claim

Art Unit: 1723

criteria. The actual diameters as in claim 5 is met by the reference, since these diameters can be any, as long as the conditions specified are met – see claim 1 of the reference. The reference does not specifically teach the feed and permeate side, but this would be only functional or intended use of the element.
